Housing in Iraq in general and Baghdad in particular is an important need and a big issue in the life of Baghdadis became the need for a complex problem is further complicated by the day for lack of plans, programs and orientations of housing and clear with the worsening problem of housing for the city of Baghdad, with the potential to double its population in the past (25) years to come, The situation worsens during the years of economic blockade, making housing moves from the stage of "disability" to the "problem" and then "crisis" as a result of the stop mass housing projects. Making the purpose of this study to develop solutions, plans and programs to solve this housing problem worsening and that turned into a crisis, and we are here to put the definitions and terminology NES definition of all citizens by the study of the housing crisis in Iraq in general and all of Iraq's provinces for the variables details of the housing crisis in which the identification of the housing stock The housing need and housing problem and overcrowding, as well as growth rates and population density. A study of some experiments specialized Arab a heart housing, similar to the housing crisis in Iraq and to identify solutions to problems and design and style of implementation and management expropriated the land and the style of the distribution of residential units and how to get the citizen limited income and employee housing units for the purpose of drawing lessons them and get to know the method of solution so housing crisis, Assuming that the planning studies, the overall city of Baghdad and to ensure that the expectations of population growth for the short term and the medium and long term, as well as housing a high-density city of Baghdad is the base discreet to solve the problem of housing the growing alignment between housing high-density expected with the conditions of the city of Baghdad, environmental, social and economic, as well as sustainability is the prerequisite to solve that
problem, and then put the plan residential comprehensive City Baghdad to resolve the housing crisis in which up to the year 2040 no status plan over 25 years starting from 2015 and ending in 2040 after a study of the housing stock in Baghdad and the population growth rate and population growth, overcrowding and housing need and housing problem to be able to these data of knowledge population and housing stock and housing need and housing problem and the growth rate and population growth for the year 2040. Plan was developed that we can which calculate the number of residential units to be implemented until 2040 with COST pilot for the purpose of implementation of these units, after we got to tabbed implementation of price per square meter (units of housing and services for infrastructure) by the Ministry of Construction and Housing and the plan that has been applied by the competent authorities of a heart housing in Iraq would have identified the correct pace towards resolving this crisis and to be able to live from Baghdad's housing cream worthy of their history and their culture and welfare of confidence.
