#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                              | College of Engineering/ University of Baghdad |
|--|---|
| 2. University Department/Centre                      | Chemical Engineering                          |
| 3. Course title/code                                 | Organic chemistry                             |
| 4. Modes of Attendance offered                       | Full time                                     |
| 5. Semester/Year                                     | 2020/2021 Acdemic Year                        |
| 6. Number of hours tuition (total)                   | 150 hrs.( 5 hrs. per week)                    |
| 7. Date of production/revision of this specification | 4/2/2021                                      |

#### 8. Aims of the Course

- 1- Introduction of the principles of organic Chemistry
- 2- Understand the theory of modern Organic chemistry
- 3- Understanding the mechanisms of chemical reactions
- 4- Understanding of organic chemical reactions and hydrocarbons compounds .
- 5- Explore the preparation and naming of organic compounds

9. Learning Outcomes, Teaching ,Learning and Assessment Method

| Cognitive goals.   |
|--|
| A1.understanding the preparation method of organic compounds   |
| A2. Define the naming method for hydrocarbons compounds  |
| A3. Use laboratory to find and unknown materials and to prepare organic  |
| compounds  |
|  |
| B. The skillsgoalsspecialtothe course  |
| B1. Help student to develop a range of graduate attributes.  |
| B2. Develop subject-specific skills for student through taking part in lectures,                                     |
| seminars, field-trips, completing assignments, projects, dissertations and outreach work and laboratory experiments. |
| B3. Student may take the opportunity to become involved in Department events and                                     |
| research seminar (or another college).   |
| Teaching and Learning Methods  |
| 1.Facilitating the integration of knowledge, skills and attitudes o teaching and                                     |
| learning in groups 2. Facilitating learning and setting ground rules   |
| 3. Explaining  |
| 4. Car. a. 1. a. a. a. a.  |
| <ul><li>4. Group dynamics</li><li>5. Managing the group</li></ul>  |
| 6.Lectures   |
| 7. Small group teaching methods and discussion techniques  |
| 8. Seminars and tutorials  |
| 9. Computer based teaching and learning – information technology and the World                                       |
| Wide Web 10. Introducing problem based learning  |
| 11. Case based learning and clinical scenarios   |
| □□References, further reading and useful links   |
|  |
|  |
|  |
| Assessment methods   |
|  |

- 1. Exams. This includes mid-term exams, final exams, and tests at the end of course units. The best tests include several types of questions short answer, multiple-choice, true-false, and short essay to allow students to fully demonstrate what they know.
- 2. Papers, projects, and presentations. These give students the chance to go deeper with the material to put the knowledge they've acquired to use or create something new from it. This level of application is an extremely important and often overlooked part of the learning process. These types of projects also give students who do not test well a chance to shine.
- 3. Portfolios. Submitting a portfolio at the end of a course can be a powerful way for students to see the progress they've made. More than just a collection of students' work from the semester, good portfolios also include reflections on their learning. Asking students to spell out the concepts or techniques used with each piece, the themes addressed, and hurdles faced also brings a sense of completion to the learning process

#### C. Affective andvaluegoals

C1. Thinking Skills are the mental processes we use to do things like: solve problems, make decisions, ask questions, make plans, pass judgements, organise information and create new ideas.

C2. Starting lessons with a puzzle or game can be a useful warm-up, but another possibility is to try some brain gym, a series of exercises and massage routines designed to increase the supply of oxygen to the brain and improve mental alertness

C3. Learn the students to use Mind-maps method which can be a useful tool for note-taking or revision, for thinking through a complex problem or for presenting information to others.

- D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Setting appropriate achievement levels can ensure that all students attain the adequate level of transferable skills for a qualification that will allow them to work in their chosen occupation. Achievement levels need to be set based on industry participation and should be reviewed regularly.
  - D2. Making learning environments as "real' as possible
  - D3. To create a well-functioning, credible assessment system, students' assessment records will have to be stored and made accessible to relevant stakeholders. Having students retake tests to assess their transferable skills when, for instance, changing schools, can create frustration and cynicism about the system

| 10. Course Structure |                       |              |   |                    |                   |

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

| 1. Teaching Institution                              | College of Engineering               |
|--|--------------------------------------|
|  | University of Baghdad                |
| 2. University Department/Centre                      | Chemical engineering department      |
| 3. Course title/code                                 | Analytical chemistry CH.123          |
| 4. Programme(s) to which it contributes              | Chemical engineering program         |
| 5. Modes of Attendance offered                       | Annual System ; There is only one    |
|  | mode of delivery, which is a "Day    |
|  | Program". The students are full time |
|  | students, and on campus. They attend |
|  | full day program in face-to-face     |
|  | mode. The academic year is           |
|  | composed of about 30-week regular    |
|  | subjects.                            |
| 6. Semester/Year                                     | Year/ 2020-2021                      |
| 7. Number of hours tuition (total)                   | 150 hrs. / 5 hrs. per week           |
| 8. Date of production/revision of this specification | 3 - 2 -2021                          |

| 9. Aims of the Course   |
|---|
| Those who will take this course will have extensive training in the subjects that deal with chemical analysis, like calculations based on the weight relations of chemical formulas and equations, begin our study of quantitative analysis with special emphasis on analytical applications (molarity, normality, pH of solution, Equilibrium constants)  Water treatment calculation like Total Hardness Determination Using EDTA  This will give the students background and strong basic to higher level courses involving dealing with different solutions specifically during dealing with solutions in laboratory. |
|   |
|   |
|   |
|   |
|   |
|   |
| 10. Learning Outcomes, Teaching ,Learning and Assessment Method   |
| A- Knowledge and Understanding A1. Introduce basic definitions and introductory concepts of analytical chemistry.   |
| ${ m A2}.$ Show the different methods to prepare solutions with different concentrations and PH.  |
| ${ m A3.}$ Explains the methods to control the precipitation process . ${ m A4.}$ Show the methods for the quantitative calculations of oxidation reduction reactions.  |
| A5. Water treatment like Total Hardness Determination Using EDTA  |
| ${ m A6}$ . Provide a background to higher level courses involving dealing with different solutions.  |
| A7. Provide a strong quantitative and analytical understanding to the students in order to be able to deal with different solution concentrations and its preparation in chemical industry  |
| B. Subject-specific skills B1. Solve chemical reaction examples using numerical methods. B2. Boding the class work with the laboratory work.  |

## Teaching and Learning Methods 1. Lectures. 2. Tutorials. 3. Homework and Assignments. 4. Lab. Experiments. 5. Tests and Exams. 6. In-Class Questions and Discussions. 7. Connection between Theory and Application. 8. In- and Out-Class oral conservations. 9. Reports, Presentations, and Posters. Assessment methods 1. Examinations, Tests, and Quizzes. 2. Extracurricular Activities. 3. Student Engagement during Lectures.

C3. Analysis assumptions.

C2. Using mathematical models.

C. Thinking Skills

chemistry.

D. General and Transferable Skills (other skills relevant to employability and personal development)

D1. Community effectivity.

D2. Work individually and in group in international and multidicplinary teams.

C1. Developing critical and creative thinking skills related to analytical

D3. Understanding impact of engineering solutions in an environmental and social context.

#### 11. Course Structure

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution   | College of Engineering/ University of Baghdad  |  |  |  |  |
|---|--|--|--|--|--|
| 2. University Department/Centre   | Department of Chemical Engineering (CHED)  |  |  |  |  |
| 3. Course title/code  | Chemical Engineering Principles /CHE141  |  |  |  |  |
| 4. Programme(s) to which it contributes   | Chemical Engineering Department (CHED)   |  |  |  |  |
| 5. Modes of Attendance offered  | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program in face-to-face mode. The academic year is composed of 30-week regular subjects. |  |  |  |  |
| 6. Semester/Year  | 1 <sup>st</sup> & 2 <sup>nd</sup> Semesters/Academic Year<br>2020 -2021  |  |  |  |  |
| 7. Number of hours tuition (total)  | 120 h/ 4 h per week  |  |  |  |  |
| 8. Date of production/revision of this specification  | 28-11-2020   |  |  |  |  |
| 9. Aims of the Course   |  |  |  |  |  |
| The aims of the course are: 1. Students develop a fundamental understanding of the basic principles of chemical engineering processes and calculations. |  |  |  |  |  |

- 2. Students can examine and select pertinent data, and solve material balance problems (application, analysis, synthesis).
- 3. Students can select and/or evaluate problem solution methods, for example, between analytic and numerical solution techniques.
- 4. Students can give examples of important application of material balances in chemical engineering processes.
- 5. Students can evaluate their own solutions and those of others to find and correct errors.

#### 10. Learning Outcomes, Teaching, Learning and Assessment Methode

#### A- Knowledge and Understanding

- A1. Ability to identify and describe various unit operations in chemical industry.
- A2. Ability to change and derive units from one unit to others.
- A3. Ability to calculate moles, density and concentrations.
- A4. Ability to perform mass balance problems involving simple or multiple-unit processes, recycle, bypass and purge...
- Ability to calculate the density and specific gravity for gases. Calculate the partial pressure of the components of a saturated ideal gas.

#### B. Subject-specific skills

- B1. Solve material balances problems involving ideal gases.
- B2. Ability to demonstrate effective team work and problem solving skills.

C. Thinking Skills

C1. Developing critical and creative thinking skills related to material balance on chemical engineering processes. C2. Using different methods solution.

C3. Analysis assumptions.

D. General and Transferable Skills (other skills relevant to employability and personal development)

D1. Community effectively.

D2. Work individually and team members in international and multidicplinary teams.

D3. Understanding impact of engineering solutions in an environmental and social context.

#### **Teaching and Learning Methods**

- 1. Lectures
- 2. Tutorials
- 3. Homework and assignments
- 4. Tests and Exams
- 5. In-Class questions and discussions
- 6. Connection between theory and application
- 7. Seminars
- 8. In- and Out-Class oral conservations
- 9. Reports, presentations, and posters

#### Assessment methods

- 1. Examinations, Tests, and Quizzes.
- 2. Extracurricular activities and homework.
- 3. Student engagement during lectures

| 11. Course Structure |                       |                   |   |                        |                          |

#### 12. Infrastructure

Required reading:

· COURSE MATERIALS

· CÔRE TEXTS

· OTHER

#### **Textbook**

1. David M. Himmelblau and James B. Riggs, 2004 "Basic Principles and Calculations in Chemical Engineering", Seventh Edition.

#### **References**

- Richard M. Felder and Ronald W. Rousseau, 1999 "Elementary Principles of Chemical Processes", Third Edition.
- 2. Joseph P. Reynolds, John S. Jeris and Louis Theodore, 2002 "Handbook of chemical and environmental Engineering Calculations"

#### **Others**

- 1. Notebook prepared by the instructor of the course
- 2. Collection of sheets of solved and unsolved problems and Exams sheets

Special requirements (include for example workshops, periodicals, IT software, websites)

- 1. Available websites related to the subject
- 2. Excel or similar software for the solution of lengthy problems.

| Community-based facilities  |
|-----------------------------|
| (include for example, guest |
| Lectures, internship, field |
| studies)                    |

- 1. Field and scientific visits
- 2. Extra lectures by foreign guest lecturers

| 13. Admissions             |                   |  |  |
|----------------------------|-------------------|--|--|
| Pre-requisites             | CHE121 and CHE123 |  |  |
| Minimum number of students | 40                |  |  |
| Maximum number of students | 70                |  |  |

#### Instructor:

#### Asst. Prof. Dr. Sama M. Al-Jubouri

Assistant Professor, Transport phenomena/Water treatment Department of Chemical Engineering College of Engineering University of Baghdad

#### 8. Aimsofthe Course

- 1-To study the first order systems response, Time delay, Steady state coefficient.

  2- Understand, the final value theorem, 2<sup>nd</sup> order system.
- 3- Learn how to use the Closed loop systems, Transfer function and flow diagram.
- 4-To study the Air control valve.
- 5- Understand the proportional, integral, differential controlar.
- 6- To study the Optimum control by zegler nickes method, stability, Routh method.
- 7-To learn Frequency response bode and niquist diagram.

9. LearningOutcomes, Teaching,LearningandAssessmentMethode

- A-Cognitive goals.
- A1.Learn how to derive the transformation function of devices in chemical engineering.
- A2- Knowing the response when disturbance occurs on any system.
- A3- Knowing how to handle the changes that occur on any device.
- A4 Learn closed control systems.
- A5- Know how to use the final control devices.
- A6- Understanding the stability of systems

.

#### B.The skillsgoalsspecialtothe course

- B1. Solve process control examples.
- B2. Learn graphical methods to solve problems.

#### TeachingandLearningMethods

- 1. Lectures.
- 2. Tutorials.
- 3. Homework and Assignments.
- 4. Tests and Exams.
- 5. In-Class Questions and Discussions.
- 6. Connection between Theory and Application.
- 7. Field Trips.
- 8. Seminars.

#### Assessmentmethods

- 1. Examinations, Tests, and Quizzes.
- 2. Extracurricular Activities.
- 3. Student Engagement during Lectures.
- 4. Responses Obtained from Students

#### C.Affective andvaluegoals

- C1. Developing critical and creative thinking skills related process control in chemical engineering.
- C2. Using mathematical models.
- C3. Analysis assumptions.

#### TeachingandLearningMethods

- 1-Lectures.
- 2-Tutorials.
- 3-Homework and Assignments.
- 4 -Tests and Exams.
- 5-In-Class Questions and Discussions.
- 6-Connection between Theory and Application.
- 7 -Field Trips.
- 8-Seminars.

#### Assessmentmethods

- 1-Examinations, Tests, and Quizzes.
- 2-Extracurricular Activities.
- 3-Student Engagement during Lectures.
- 4-Responses Obtained from Students
  - D.Generalandrehabilitativetransferred skills(other skillsrelevantto employabilityand personaldevelopment)
- D1. Community effectivity.
- D2. Work individually and team members in international and multidicplinary teams.
- D3. Understanding impact of engineering solutions in an environmental and social context.

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programm specifications.

| 1. Teaching Institution  | College of Engineering/ University of Baghdad |  |  |  |  |
|--|---|--|--|--|--|
| 2. University Department/Centre  | Chemical Engineering                          |  |  |  |  |
| 3. Course title/code   | English Language                              |  |  |  |  |
| 4. Modes of Attendance offered   | time Full                                     |  |  |  |  |
| 5. Semester/Year   | 2021/2020 Acdemic Year                        |  |  |  |  |
| 6. Number of hours tuition (total)   | 60 hrs.(2 hrs. per week)                      |  |  |  |  |
| 7. Date of production/revision of this specification                           | 1/2/2021                                      |  |  |  |  |
| 8. Aim of the Course   |   |  |  |  |  |
| Exploring the English language with focus on reading, grammar, and vocabulary. |   |  |  |  |  |

9. Learning Outcomes, Teaching ,Learning and Assessment Method

Cognitive goals. A1.Read English, understand, and summarize A2. Read again, understand more, and summarize better. B. The skillsgoalsspecialtothe course B1.Develop the students' reading skills B2. Develop the students' speaking skills Teaching and Learning Methods 1. Facilitating the integration of knowledge, skills and attitudes o teaching and learning in groups 2. Facilitating learning and setting ground rules 3.Explaining 4. Group dynamics 5. Managing the group 6.Lectures 7. Small group teaching methods and discussion techniques 8. Seminars and tutorials

Assessment methods

- 1. Exams. This includes mid-term exams, final exams, and tests at the end of course units. The best tests include several types of questions short answer, multiple-choice, true-false, and short essay to allow students to fully demonstrate what they know.
- 2. Papers, projects, and presentations. These give students the chance to go deeper with the material to put the knowledge they've acquired to use or create something new from it. This level of application is an extremely important and often overlooked part of the learning process. These types of projects also give students who do not test well a chance to shine.
- 3. Portfolios. Submitting a portfolio at the end of a course can be a powerful way for students to see the progress they've made. More than just a collection of students' work from the semester, good portfolios also include reflections on their learning. Asking students to spell out the concepts or techniques used with each piece, the themes addressed, and hurdles faced also brings a sense of completion to the learning process

#### C. Affective andvaluegoals

C1. Thinking Skills are the mental processes we use to do things like: solve problems, make decisions, ask questions, make plans, pass judgements, organise information and create new ideas.

C2. Starting lessons with a puzzle or game can be a useful warm-up, but another possibility is to try some brain gym, a series of exercises and massage routines designed to increase the supply of oxygen to the brain and improve mental alertness

C3. Learn the students to use Mind-maps method which can be a useful tool for note-taking or revision, for thinking through a complex problem or for presenting information to others.

- D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Setting appropriate achievement levels can ensure that all students attain the adequate level of transferable skills for a qualification that will allow them to work in their chosen occupation. Achievement levels need to be set based on industry participation and should be reviewed regularly.
  - D2. Making learning environments as "real' as possible
  - D3. To create a well-functioning, credible assessment system, students' assessment records will have to be stored and made accessible to relevant stakeholders. Having students retake tests to assess their transferable skills when, for instance, changing schools, can create frustration and cynicism about the system

| 10. Course Structure |       |                     |                                  |                    |                      |

#### TEMPLATE FOR COURSE SPECIFICATION

#### HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                 | College of Engineering University of Baghdad   |  |  |
|---|--|--|--|
| 2. University Department/Centre         | Chemical Engineering Department (CHED)   |  |  |
| 3. Course title/code & Description      | Engineering Analysis/CHE 331 This course concerns with a method of analysis and solution of differential equation. The topics covered are: 1st order differential equations, 2nd order differential equations, Frobineous method, Higher order differential equations, Simultaneous differential equations, Partial differential equations, Laplace transform, Mathematical modelling, Finite differences (application |  |  |
|   | on chemical engineering systems) with multiple steps.  The course is taught through 4 hrs per week, 3 theories, and 1 tutorial.  |  |  |
| 4. Programme(s) to which it Contributes | Chemical Engineering Department (CHED)   |  |  |
| 5. Modes of Attendance offered          | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program in face-to-face mode. The academic year is composed of 30-week regular subjects.   |  |  |

| 6. Semester/Year                                     | 1 <sup>st</sup> & 2 <sup>nd</sup> Semesters/Academic Year 2020<br>– 2021 |
|--|--|
| 7. Number of hours tuition (total)                   | 120 hrs. / 4 hrs. per week   |
| 8. Date of production/revision of this specification | 1 - 10 - 2020  |

#### 9. Aims of the Course

The aims of the course are:

- 1. To develop and understanding the methods to solve differential equations.
- 2. To build students capacity in modeling and solving chemical engineering problems.
- 3. To present the basic transport equations and to apply these equations practically.
- 4. To build the capacity in the design of equipment.

#### 10. Learning Outcomes

By the end of this course, the student should be able to:

- a) Know how to solve the different types of 1<sup>st</sup> order differential equations using different types of methods.
- b) Know how to solve the different types of 2<sup>nd</sup> order differential equations using different types of methods.
- c) Know how to use different techniques to solve partial differential equations
- d) Build students capacity in modeling and solving chemical engineering problems.
- e) Be familiar with the momentum, heat and mass transport equations and able to use the relevant equations in solving the problems
- f) Identify, formulate and solve analysis problems.
- g) Understand how to use the initial and boundary conditions.
- h) Be able to apply modern knowledge and to apply mathematics, science, engineering and technology to unit operation problems and applications.
- i) Work in groups and function on multi-disciplinary teams.
- j) Understand professional, social and ethical responsibilities.
- k) Communicate effectively.

#### 11. Teaching and Learning Methods

- 1. Lectures
- 2. Tutorials
- 3. Homework and assignments
- 4. Tests and Exams
- 5. In-Class questions and discussions

۲

6. Connection between theory and application
7. Seminars
8. In- and Out-Class oral conservations
9. Reports, presentations, and posters
12. Assessment Methods
1. Examinations, Tests, and Quizzes.
2. Extracurricular activities and homework.
3. Student engagement during lectures.
13. Grading Policy
Two Major Exams
Quizzes and homework
Attendance & Class participation
5%

70%

<u>100%</u>

Final Exam

Total

#### 9. Aims of the Course

- 1- Learning the basic principles of engineering drawing.
- 2- Develop the student's skills in using tools to draw the engineering shapes.
- 3- Knowing the types and uses of lines and the difference between them.
- 4- Understand how to measure, read and put appropriate dimensions and how to distribute dimensions on the shapes inside the sheet.
- 5- Learning and training students to read the engineering shapes and to dissociate and gather the parts by drawing the projections and sections and then isometric drawing.

- 6- The ability to grow and small the shapes in suitable scale.
- 7-Finally, the student being able to bring out an engineering sheet arranged by geometric art assets through implementation of several applications on engineering operations.

# 10. Learning Outcomes

At the end of the class, the student will be able to:

- a) Know and understand the basic principles of engineering drawing.
- b) Understand and apply the right use of the drawing tools.
- c) Read and understand the drawing sheets.
- d) Conclude of projections and sections that lead to extend the mind and imagination of students.
- e) Gather the parts or projections and sections to reach and find the final design for the shape.
- f) Draw perfect engineering drawing sheets.
- g) Grow and minimize any part or shape.
- h) Have communication skills with references and designers.
- i)Implement the panel with all engineering requirements (as a designer) that accepted in the field of work, and that reflect the skills that trains them.

# Teaching and Learning Methods

- 1. Lectures.
- 2. Classwork in the atelier.
- 3. Homework and assignments.
- 4. Tests and exams.
- 5. In-Class questions and discussions.
- 6. Connection between theory and application.

#### Assessment methods

- 1. Examinations, tests, and quizzes.
- 2. Extracurricular activities.
- 3. Student engagement during lectures.
- 4. Responses obtained from students.

| 2. University Department/Centre                      | Chemical Engineering Department   |
| 3. Course title/ description                         | Equipment design This course introduces the basic principles and design procedure for different chemical engineering equipment. The design is based on past experience and empirical correlations. These units are heat transfer equipment, shell and tube heat exchanger, condenser, reboilers, vaporizers, packed bed columns, tray columns, absorbers, strippers, distillation columns, and catalytic packed bed reactor. Finally, mechanical design of pressure vessels are extensively demonstrated. The course is taught through 3 theoretical hrs. |
| 4. Program (s) to which it contributes               | Chemical Engineering  |
| 5. Modes of Attendance offered                       | Semesters System. The delivery mode is the "Day Program". Also the "Online Program" mode is used for explaining more details. The students are full time students. The academic semester is composed of 30-week regular subjects.   |
| 6. Semester/Year                                     | 1 <sup>st</sup> & 2 <sup>nd</sup> Semesters/Academic Year 2020-2021   |
| 7. Number of hours tuition (total)                   | 90 hrs. /3 hrs. per week  |
| 8. Date of production/revision of this specification | 2021-2-3  |

#### 9. Aim of the course

- 1- To know the types of heat exchangers, and to learn the important design considerations, the importance of proper arrangement of heat exchanger and where to assign process and service fluids for a given duty.
- 2- To learn how to design different types of heat exchangers offering good heat transfer and low pressure drop
- 3- To understand the fundamentals of condensation and boiling heat transfer. Also to recognize the configurations of condensers, reboilers, and vaporizers as different types of heat transfer equipment. And to learn the design procedure for calculation the size of these units.
- 4- To learn the difference between the packed and plate column (as a mass transfer equipment) according to different design considerations and process fluids.
- 5- To learn how to design packed bed absorber or stripper.
- 6- To recognize the configuration and component parts of plate distillation columns.

- 7- To learn how to design plate distillation columns including components parts.
- 8- To design the catalytic fixed bed reactors using space velocity.
- 9- To learn how to make the complete mechanical design for pressure vessel including heads and supports.

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

# 10. Learning Outcomes

At the end of the class the student will be able to:

- a- Understand how to make the proper arrangement of a heat exchanger without phase change following design consideration for a given duty offering good heat transfer and low pressure drop.
- b- Design heat exchanger specifying number of tubes, diameter, length, and shell diameter following standards and offering good heat transfer and low pressure drop.
- c- Understand how to design condensers, reboilers and vaporizers considering good overall heat transfer coefficient and low pressure drop.
- d- Design packed bed absorber or stripper using random packing specifying the diameter and height of the required column and a certain recovery and feed concentration.
- e- Learn how to calculate the number of actual plates in distillation columns using empirical equations.
- f- Learn how to calculate the diameter of a plate distillation columns
- g- Calculate the flooding point, weep point, weir liquid crest, weir height, and weir length at a certain allowable pressure drop.
- h- Design the catalytic fixed bed reactors using space velocity method.
- i- Make the complete mechanical design and calculations of the thickness required for pressure vessels and for flat or domed heads.
- j- Be familiar with different types of vessel support.
- k- Work in groups and function on multi-disciplinary teams.
- 1- Identify, formulate and solve engineering equipment design problems.
- m- Understand professional, social, and ethical responsibilities.
- n- Communicate effectively.
- o- Use the techniques, skills, and modern engineering tools necessary for engineering practice in design applications.

#### 11. Teaching and Learning Methods

- 1.Lectures
- 2. Tutorials
- 3. Presentations, sketches and posters for units and its individual components.
- 4. Scientific videos of different individual units.
- 5. Homework and assignments
- 6.Tests and Exams
- 7.In-class questions and discussions
- 8. Connection between theory and application
- 9. field trips

- 10. Extracurricular activities.
- 11. Seminars.
- 12. In and out-class oral conversations.

#### 12. Assessment methods

- 1. Exams, Tests and Quizzes.
- 2. Student engagement during lectures
- 3. Responses obtained from students, questionnaire about curriculum and faculty member (instructor).
- 4. extracurricular activities

# 13. grading policy

- 1. Exams: there will be a minimum of two closed books and notes exam during the semester, will count 20% of the total course grade.
- 2. Quizzes: there will be at least one quiz during the semester. The quiz will count 5% of the total course grade
- 3. Class work: there will be at least two sets of classwork during the academic semester. The class work will count 5 % of the total course grade.
- 4. Final exam: it will be a comprehensive closed books and notes exam. It will take place on July 2021 from 9:00 AM to 12:00 PM in an academic room. The final exam will count 70% of the total course grade.

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                              | College of Engineering/ University of Baghdad  |
|--|--|
| 2. University Department/Centre                      | Chemical Engineering   |
| 3. Course title/code                                 | Fluid Flow   |
| 4. Programme(s) to which it contributes              | Chemical Engineering Program   |
| 5. Modes of Attendance offered                       | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program in face-to-face mode. The academic year is composed of 30-week regular subjects. |
| 6. Semester/Year                                     | 1st & 2nd / Academic Year 2020-2021  |
| 7. Number of hours tuition (total)                   | 90 hrs. / 3 hrs. per week  |
| 8. Date of production/revision of this specification | 2-2-2021   |
|  |  |

#### 9. Aims of the Course

- 1- The type of fluids and flow.
- 2- pressure measurements by simple manometer and Bourdon gauge
- 3- evaluation of volumetric flow rates and average velocities
- 4- Applications of Bernoulli's equation, evaluation of head losses in pipes.
- 5- The utilization of flow rates devices.
- 6- Pumps and turbines with their efficiencies.
- 7- Flow of fluids in packed bed.

- 10. Learning Outcomes, Teaching Learning and Assessment Methods
  - A- Knowledge and Understanding
    - A1. Calculate the pressure drop for any flow system by accurate methods.
    - A2. Define the types of fluids and being able for making dimensional analysis for different systems.
    - A3. Understand the difference in velocity distribution between laminar and turbulent flow.
    - A4. Being able of making energy balance for any system and knowing the basis for deriving Bernoulli equation.
    - A5. Measure the losses in the energy due to friction in pipes and fittings and due to sudden expansion or contraction.
    - A6. Knowing the different types of flow measurement devices for flow through pipes and open channels.
    - A7. Pumps definition and types, centrifugal pump relations, being able to locate the duty point and NPSH.
    - A8. Understand the flow through packed beds, and being able of measuring voidage and porosity and friction factor for flow through packed beds.
  - B. Subject-specific skills
    - B1. Solve Fluid Flow examples using numerical methods.
    - B2. Learn graphical methods to solve problems of any fluid flow system.
  - C. Thinking Skills
    - C1. Developing critical and creative thinking skills related to Fluid Flow.
    - C2. Using mathematical models.
    - C3. Analysis assumptions.
  - D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Community affectivity.
  - D2. Work individually and team members in international and multidisciplinary teams.
  - D3. Understanding impact of engineering solutions in an environmental and social context.

# Teaching and Learning Methods

- 1. Lectures.
- 2. Tutorials.
- 3. Homework and Assignments.
- 4. Tests and Exams.
- 5. In-Class Questions and Discussions.
- 6. Connection between Theory and Application.
- 7. Seminars.
- 8. In- and Out-Class oral conservations.

#### Assessment methods

- 1. Examinations, Tests, and Quizzes.
- 2. Extracurricular Activities.
- 3. Student Engagement during Lectures.
- 4. Responses Obtained from Students

| The aims of the course are:  |  |  |  |  |
| <ol> <li>Introduction to heat transfer.</li> <li>Conduction</li> <li>Convection</li> </ol> |  |  |  |  |

4. Radiation

6. Heat exchanger

5. Condensation and boiling

# 10. Learning Outcomes, Teaching, Learning and Assessment Method

By the end of this course, the student should be able to:

- 1. Understand the modes of heat transfer.
- 2. Be familiar with the problems in heat transfer, and their methods of solving.
- 3. Understand the steady and unsteady process of conduction heat transfer.
- 4. Be familiar with the free and forced convection.
- 5. Be familiar with radiation and its application.
- 6. Understand the heat exchanger, its design and calculation.

# Teaching and Learning Methods

- 1. Lectures
- 2. Tutorials
- 3. Homework
- 5. Tests and exams.
- 6. Class discussion.
- 7. Seminars.
- 8. Reports, presentations and posters.

#### Assessment methods

Examinations, Tests, and Quizzes.

Extracurricular activities and homework.

Student engagement during lectures.

| 4. Modes of Attendance offered                       | Annual System. The students attend full day program in on line mode using Google class room. The academic year is composed of 30 week. |
| 5. Semester/Year                                     | 1st & 2nd / Academic Year 2020 – 2021  |
| 6. Number of hours tuition (total)                   | 60hrs. / 2 hrs. per week   |
| 7. Date of production/revision of this specification | 1-9-2020   |
| 8. Aims of the Course                                |  |

The aims of the course:

- 1. The student will have the skills as a project manager.
- 2. The ability to transform industrial problems to linear programming models and find the optimal solution.
- 3. To deal with unexpected events during the production process.
- 4. To make the right decision of industrial problems to find the maximum profit or minimum cost; such as; assignment, transportation, blending and petroleum refinery problems; such as crude oil distillation; and others.

- 5. Calculate the project time.
- 6. Study how to prevent any delay in project accomplishes time.
- 9. Learning Outcomes, Teaching ,Learning and Assessment Method
  - A- Cognitive goals:
  - A1. The student will have the skills as a project manager:
  - A2. To convert practical industrial problems to linear programming models.
    - A3. To Find the optimal solution of the models.
  - A4. To under stand the duality theory models to the dual form.
  - A5. The student will be able to deal with unexpected events during the production processes by post –optimally analysis.
    - A6. To find the minimum cost of the transportation problems.
    - A7. To make the right decision of assignment problems.
  - A8. To calculate the project time by studying the net work models.
  - A9.To find the critical path to prevent any delay in the project accomplishes time.
  - A10. To study and modeling of important industrial applications, such as, blending of gasoline and petroleum refinery problems.
  - B. The skills goals special to the course
    - B1. Modeling of optimization problems.
    - B2. Studying linear programming methods.

Teaching and Learning Methods

On line learning using Google class room (pdfs, videos & record of on line lectures).

Assessment methods:

On line discussions using Telegram channel and Google class room

# C. Affective and value goals:

- C1. Developing critical and creative thinking skills related to optimization problems.
- C2. Modeling of industrial problems.
- C3.Deal with un-expected events.

# Teaching and Learning Methods

- 1. Lectures.
- 2. Tutorials.
- 3. Home and class works and Assignments.
- 4. Quizzes and Exams.
- 5. On -line Questions and Discussions.
- 6. Report.
- 7. Connection between Theory and Application.
- 8. Field Trips.
- 9. Seminars.
- 10. In- and out- oral conservations on Google class room.

#### Assessment methods

- 1. Examinations and Quizzes.
- 2. Extracurricular Activities.
- 3. Student Engagement during Lectures.
- 4. Responses Obtained from Students
- D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Community affectivity.
  - D2. Work individually and team members in international and multidisciplinary teams
  - D3. Understanding impact of engineering solutions in an environmental and social context.

| 5. Modes of Attendance offered                       | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program in face-to-face mode. The academic year is composed of 30-week regular subjects. |
| 6. Semester/Year                                     | 1st & 2nd / Academic Year 2020 – 2021  |
| 7. Number of hours tuition (total)                   | 120 hrs. / 4 hrs. per week   |
| 8. Date of production/revision of this specification | 1-9-2020   |

### 9. Aims of the Course

The aims of the course are:

- 1. Understand the mass transfer theories.
- 2. Understand the diffusion, mass transfer coefficient, modes of diffusion.
- 3. Absorption process calculations for tray and packed towers.
- 4. Liquid –liquid extraction, principles, calculations.
- 5. Solid-liquid extraction process .principles to.
- 6. Distillation process from fundamentals to industrial application.
- 7. Drying process.
- 8. Evaporation process
- 9. Humidification process

# 10. Learning Outcomes, Teaching ,Learning and Assessment Method

# By the end of this course, the student should be able to:

- a) Know the importance of unit operation in the design of most of the chemical engineering units.
- b) Be familiar with the momentum, heat and mass transport equations and able to use the relevant equations in solving the problems
- c) Recognize the analogy between momentum, heat and mass transport.
- d) Understand the boundary layer theory.
- e) Understand fluid-particle systems and equipment.
- f) Understand fluid flow through packed.
- g) Know various chemical engineering separation processes.
- h) Select appropriate separation technique for intended problem.
- i) Identify separations equipment of various types and their components.
- j) Understand the mechanism of the separation.
- k) Evaluate competing separation technologies on factors such as simplicity, reliability, and cost.
- 1) Be able to apply modern knowledge and to apply mathematics, science, engineering and technology to unit operation problems and applications.
- m) Work in groups and function on multi-disciplinary teams.
- n) Identify, formulate and solve unit operation problems.
- o) Understand professional, social and ethical responsibilities.
- p) Communicate effectively.
- Use the techniques, skills, and modern engineering tools necessary for engineering practice in unit operation applications

# Teaching and Learning Methods

- 1. Lectures
- 2. Tutorials
- 3. Homework and assignments
- 4. Tests and Exams
- 5. In-Class questions and discussions
- 6. Connection between theory and application
- 7. Seminars
- 8. In- and Out-Class oral conservations
- 9. Reports, presentations, and posters

#### Assessment methods

- 1. Examinations, Tests, and Quizzes.
- 2. Extracurricular activities and homework.
- 3. Student engagement during lectures.

# 11. Course Structure

# TEMPLATE FOR COURSE SPECIFICATION

#### HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                 | College of Engineering University of Baghdad  |
|---|---|
| 2. University Department/Centre         | Chemical Engineering Department(CHE232)   |
| 3. Course title/code & Description      | Material Science / This course involves investigating the relationships that exist between the structures and properties of materials. Define the key mechanical properties of materials (tensile strength, yield strength, fatigue resistance, creep strength. |
| 4. Programme(s) to which it Contributes | This programme contributes the graduated chemical engineers to get knowledge in the material science.   |
| 5. Modes of Attendance offered          | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on Campus. The academic semester is consists of 15-weeks for Material Science. The lectures take two hours per week.                      |
| 6. Semester/Year                        | one semesters per year  |
| 7. Number of hours tuition (total)      | Annual system consists of 30 hours  |

# 8. Date of production/revision of this specification

6 of February in 2021

# 9. Aims of the Course

The student will recognize uses of the common engineering alloys and other materials such as polymer, ceramic, etc. by depending on their properties (i.e. mechanical, physical properties, and their reactivity towered the surrounding). He also will able to predict the types of the mechanical failures that can occur during unit operation.

# 10. Learning Outcomes

The knowledge and skills expected to be attained by the student upon completion of the course. The student will be able to:

- a. Review of the types of materials.
- b. Review of the atomic structure and atomic bonding in the solid materials.
- c. Understand the structure of the crystalline solid material (metals and alloys).
- d. Learn how to obtain the mechanical properties of a metal or/and an alloy.
- e. Select proper materials during designing equipment of the unit operation.
- f. Understand the phase diagram and heat treatment of a metal or/and an alloy.
- g. Understanding the metal processing and joining.
- h. Understanding the corrosion of metals and alloys
- i. Learn the types f corrosion
- j. Learn estimating the corrosion rate
- k. Knowing the methods of corrosion potection

# 11. Teaching and Learning Methods

- 1. Lectures.
- 2. Make matching between theories and applications.
- 3. Quizzes and Exams.
- 4. Case studies.

5.

# 12. Assessment Methods

There are four methods by which the students can be assessed

- a. Several Quizzes and Homework.
- b. Two exams per semester.
- c. There one only case study for each group at the end of the semester in order to use their information for solving the problem in the industries. Each group consists of 3-4 students.
- d. Final exam at the end of the semester.

# 13. Grading Policy

The annual system consists of One semester

10% per Semester Exam.

10% Semester Quizzes and Homework.

70% Final Exam.

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

| College of Engineering University of Baghdad  |
|---|
| Chemical Engineering Department   |
| Mathematics/CHE 111   |
| Chemical Engineering Department   |
| Annual system. There is only one mode of delivery, which is a "Day Program". The academic year is composed of 26-week regular subjects. 3-hour each week. |
| (1 <sup>st</sup> and 2 <sup>nd</sup> semesters)/2020-2021   |
| 78 hrs./ 3hrs. per week   |
| 28/11/2020  |
|   |

#### 9. Aims of the Course

- 1. To master algebraic topics introduced in precalculus and trigonometry.
- 2. To understand limits and investigate some of their basic properties.
- 3. To understand the basic relationship between tangent lines, rates of change, and the derivative.
- 4. To master the techniques of differentiation.
- 5. To become familiar with the standard applications of the derivative in physics, engineering, biology, chemistry, and economics.
- 6. To become familiar with parts of the theoretical framework that are appropriate at this level.
- 7. To understand the integral and its relation to the derivative.
- 8. To master techniques of integration for simple integrals and their application.
- 9. To understand numerical solution of the first of partial differential equations.

# 10. Learning Outcomes, Teaching ,Learning and Assessment Methode

- A- Knowledge and Understanding: By the end of the course the student should be able to
- A1- Work in groups and solving different problems.
- A2- Understand professional social and ethical responsibilities
- A3- Communicate effectively
- B. Subject-specific skills
- B1.Know the importance of mathematics in most of the chemical engineering problems.
- B2. Understand the differentiation concepts
- B3.Select appropriate technique for intended problem
- B4. Identify formulate and solve chemical engineering problems

#### Teaching and Learning Methods

- 1- lectures
- 2- Tutorials
- 3- Homework
- 4- Tests and exams
- 5- In class questions and discussions

#### Assessment methods

- 1- Examinations, tests and quizzes.
- 2- Homework's.
- 3- Student engagement during lectures.

#### TEMPLATE FOR COURSE SPECIFICATION

HIGHE REDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

| 1. Teaching Institution                              | College of Engineering/ University of Baghdad |
|--|---|
| 2.University Department/Centre                       | Chemical Engineering                          |
| 3.Course title/code                                  | Numerical Methods                             |
| 4.Modes of Attendance offered                        | Annual  |
| 5.Semester/Year                                      | 1st & 2nd / Academic Year 2020 – 2021         |
| 6.Number of hours tuition (total)                    | 128 hrs. / 4 hrs. per week                    |
| 7. Date of production/revision of this specification | February 2020                                 |
| 8. Aims of the Course                                |   |

The objective of the course is to be able to use Numerical methods in solving engineering problems and comparing with Analytical methods and apply these methods on Chemical Engineering problems (Mass, Heat, and Momentum transfer) and also to be able to use the spreadsheets of Microsoft EXCEL to solve these problems.

9. Learning Outcomes, Teaching, Learning and Assessment Methods

A-Cognitive goals.

A1. Using Numerical methods in solving engineering problems.

A2. Comparing with Analytical methods and apply these methods on Chemical Engineering problems.

A3. Using the spreadsheets of Microsoft EXCEL to solve these problems.

A4.

A5.

- B. The skills goals special to the course.
- B1. Using Numerical methods in solving engineering problems.
- B2. Comparing with Analytical methods and apply these methods on Chemical Engineering problems.
- B3. Using the spreadsheets of Microsoft EXCEL to solve these problems.

# Teaching and Learning Methods

- 1. The course consists of Two Halves. Both halves consist of 2 hour per week class lecture and a 2 hour computer Lab.
- 2. Each class will commence with a recap of the previous lecture, 15-20 minutes for quiz and/or homework discussion, questions will be asked and the responses will be used to evaluate the students' understanding of the topics covered.
- 3. The first half subjects are mainly on Numerical methods with Chemical Engineering (Mass, Heat, Fluid, Reactor design and Thermodynamics) applications. The 2nd half subjects are on both Numerical methods and Optimization with Chemical Engineering application.
- 4. Exam is taken at the end of each general subject. Computer Lab. Exam is taken at the end of each halves.
- 5. A computer Lab. Final Exam is taken on subjects of both Halves.

#### Assessment methods

- 1. Homework: There will be a minimum of twenty sets of homework during the academic semester. The homework will count 5 % of the total course grade.
- 2. Quizzes: There will be minimum two closed books and notes quizzes during each academic course. The quizzes will count 5% of the total course grade.
- 3. Exams: There will be four closed books and notes exams during the academic year. The four exams will count 20% of the total course grade.
- 4. Laboratory: Lab. work and two Lab. exams will count 10%.
- 5. Final Exam: The final exam will be Lab. exam (will count 10%) follow by (in different day) comprehensive exam (closed books and notes) that count 50%. The final exam will count 60% of the total course grade.

# 12. The development of the curriculum plan

There is an idea to give additional examples about the application of numerical methods in solving the chemical engineering problems in the fields of mass, heat, and fluid transfer. In addition, the statistical program will be included in the lab. Lecture to show the student the benefit of using numerical methods in fitting of experimental data.

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                              | College of Engineering/ University of Baghdad |
|--|---|
| 2. University Department/Centre                      | Chemical Engineering                          |
| 3. Course title/code                                 | Petroleum Refining Industry                   |
| 4. Programme(s) to which it contributes              | Chemical Engineering Program                  |
| 5. Modes of Attendance offered                       | Full time                                     |
| 6. Semester/Year                                     | Academic Year 2020-2021                       |
| 7. Number of hours tuition (total)                   | 120 hrs.( 4 hrs. per week)                    |
| 8. Date of production/revision of this specification | 28-11-2020                                    |
| 9. Aims of the Course                                |   |

- 1.Understand the basic principles in the crude oil refining industry
- 2. Understand the origin, composition and specifications of crude oil and the operation of oil refineries
- 3. Understand the separation and processing of crude oil and oil segments
- 4. Use mathematical methods to design petroleum units.
- 5. Knowing the different petroleum applications and processes in petroleum refineries

# 10. Learning Outcomes, Teaching ,Learning and Assessment Method

- A- Knowledge and Understanding
  - A1. Understanding the origin, physical and chemical properties of crude oil and petroleum products.
  - A2. Evaluation, treatment, and separation of crude oil.
  - A3. Understanding the thermal and catalytic processes in petroleum refineries
  - A4. Design of different units types in the petroleum refineries.
  - B. Subject-specific skills
- B1. Help student to develop a range of graduate attributes.
- B2. Develop subject-specific skills for student through taking part in lectures, seminars, field-trips, completing assignments, projects, dissertations and outreach work.
- B3. Student may take the opportunity to become involved in Department events and research seminar (or another college).

# Teaching and Learning Methods

- 1. The theory lectures.
- 2. Practical lectures.
- 3. Homework
- 4. Tests and examinations.
- 5. Questions and discussions in class
- 6. A connection between theory and practice.
- 7. Field trips.
- 8. Seminars.
- 9. Discussions inside and outside the classroom.
- 10. References and useful links

#### Assessment methods

- 1. Exams. This includes mid-term exams, final exams, and tests at the end of course units. The best tests include several types of questions short answer, multiple-choice, true-false, and short essay to allow students to fully demonstrate what they know.
- 2. Papers, projects, and presentations. These give students the chance to go deeper with the material to put the knowledge they've acquired to use or create something new from it. This level of application is an extremely important and often overlooked part of the learning process. These types of projects also give students who do not test well a chance to shine.
- 3. Portfolios. Submitting a portfolio at the end of a course can be a powerful way for students to see the progress they've made. More than just a collection of students' work from the semester, good portfolios also include reflections on their learning. Asking students to spell out the concepts or techniques used with each piece, the themes addressed, and hurdles faced also brings a sense of completion to the learning process

# C. Thinking Skills

- C1. Thinking Skills are the mental processes we use to do things like: solve problems, make decisions, ask questions, make plans, pass judgements, organize information and create new ideas.
- C2. Starting lessons with a puzzle or practice can be a useful warm-up, but another possibility is to try some brain practice, a series of exercises and massage routines designed to increase the supply of oxygen to the brain and improve mental alertness C3. Teach the students to use Mind-maps method which can be a useful tool for note-taking or revision, for thinking through a complex problem or for presenting information to others.
- D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Setting appropriate achievement levels can ensure that all students attain the adequate level of transferable skills for a qualification that will allow them to work in their chosen occupation. Achievement levels need to be set based on industry participation and should be reviewed regularly.
  - D2. Making learning environments as "real' as possible
  - D3. To create a well-functioning, credible assessment system, students' assessment records will have to be stored and made accessible to relevant stakeholders. Having students retake tests to assess their transferable skill.

# Instructor:

Prof.Dr. HUSSEIN QASIM HUSSEIN

Chem. Eng. Dept.
College of Engineering
University of Baghdad

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course  $a1_{st} \& 2_{nd}$  / Academic Year 2020-2021, the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

| 1. Teaching Institution   | College of Engineering/ University of Baghdad   |  |  |  |
|---|---|--|--|--|
| 2. University Department/Centre   | Chemical Engineering  |  |  |  |
| 3. Course title/code  | Physical chemistry  |  |  |  |
| 4. Programme(s) to which it contributes   | Chemical engineering program  |  |  |  |
| 5. Modes of Attendance offered  | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program. The academic year is composed of 30-week regular subjects. |  |  |  |
| 6. Semester/Year  | 1st & 2nd / Academic Year 2020-2021   |  |  |  |
| 7. Number of hours tuition (total)  | 120 hrs. / 4 hrs. per week and 90/3 hrs lab.  |  |  |  |
| 8. Date of production/revision of this specification  | 28/11/2020  |  |  |  |
| 9. Aims of the Course   |   |  |  |  |
| 1-Give an introduction to the uses of physical chemistry in chemical engineering 2-It provide many opportunities for the intermediate applications of ideas and equations in solving problems |   |  |  |  |
| 3-Studying thermodynamics laws zero, first, second and third law 4-Learning about Thermo chemistry  |   |  |  |  |
| 5-Show how rates of chemical reactions can be understood  |   |  |  |  |
| 6-Learn about different energy like entropy ,Gibbs and Helmoltz energies  |   |  |  |  |
| 7-Drive Maxwell relation used in thermodynamics relations   |   |  |  |  |

# 10. Learning Outcomes, Teaching ,Learning and Assessment Methode

A- Knowledge and Understanding

A1. Calculation of ideal gas law and real gas laws

A2.calculations of enthalpy at different conditions

A3.calculations of different energies

A4.learning about reactions rates

B. Subject-specific skills

B1.solving physical chemistry problems using differentiated laws during all the chapters

B2.connect between theory and the experimental work in the physical chemistry laboratory

# Teaching and Learning Methods

C1. Developing critical and creative thinking skills related to physical chemistry.

C2. Using mathematical models.

C3. Analysis assumptions.

#### Assessment methods

- .D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1.Communitiyeffectivity.
  - D2. Work individually and team members in international and multidicplinary teams.
  - D3. Understanding impact of engineering solutions in an environmental and social context.
    - C. Thinking Skills
      - C1. Developing critical and creative thinking skills related to physical chemistry.
      - C2. Using mathematical models
      - C3. Analysis assumptions

# Teaching and Learning Methods

1. Lectures.

- 2. Tutorials.
- 3. Homework and Assignments.
- 4. Tests and Exams.
- 5. In-Class Questions and Discussions.
- 1. Con Examinations, Tests, and Quizzes.
- 2. Extracurricular Activities.
- 3. Student Engagement during Lectures.
- 6. Responses Obtained from Students connection between Theory and Application.
- 7. Field Trips.
- 8. Seminars.

In- and Out-Class oral conservations

9-experments in physical chemistry lab

#### Assessment methods

- 1- Examinations ,Tests , and Quizzes
- 2-Students Engagements during lectures
- 3-Response obtained from students
- 4-Examinations in lab

| 11. Course Structure |   |                 |                                     |                     |                       |

#### TEMPLATE FOR COURSE SPECIFICATION

HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the Programme specification.

| 1.Teaching Institution                             | College of Engineering University of Baghdad   |
|--|--|
| 2.University Department/Centre                     | Chemical Engineering Department (CHED)   |
| 3.Course title/code                                | Pollution and Industrial safety (215CHPO)  |
| 4.Modes of Attendance offered                      | Annual System; There is only one mode of delivery, which is a "Day Program". The students are full time students, and on campus. They attend full day program in face-to-face mode. The academic year is composed of 30-week regular subjects. |
| 5.Semester/Year                                    | 1st& 2nd Semesters/Academic Year<br>2020-2021  |
| 6.Number of hours tuition(total)                   | 60 hrs. / 2 hrs. per week  |
| 7.Dateof production/revision of this Specification | September 2020   |

# 8. Aims of the Course

- 1. The courses will provide students with an understanding and appreciation of the environmental pollution, its types and complex interactions of man, health, and the environment.
- 2. It will expose students to the multi-disciplinary nature of Environmental Health Sciences; the information and tools required to assess environmental quality as it relates to human and ecosystem health; the negative impacts that environmental degradation can have on human, wildlife and other bioreceptors in aquatic and terrestrial ecosystems.
- 3. The purpose of this course is to give the students methods for prevention, control measures required to minimize, manage and/or eliminate specific environmental problems (especially air and water pollution).

# 9. Learning Outcomes, Teaching, Learning and Assessment Method

# A-Cognitive goals

- 1. Upon successful completion of the course, students should be able to explain how important environmental pollution and industrial safety science issues. e.g., environmental types and its definition, control, treatment, preventions, disease, toxic chemicals, air and water quality, ecosystem degradation...etc.) Impact the health of the public in the developed and developing world.
- 2. How to Select appropriate separation technique for intended pollution problems.
- 3. Evaluate competing separation technologies on factors such as simplicity, reliability, and cost.
- 4. Upon successful completion of the course, students should be able to understand and use the basic principles, concepts, and terms of environmental health.
- 5. Upon successful completion of the course, students should be able to apply the scientific method for observation, inquiry and evaluate the relationships between science, technology, and society as these affect critical historical or contemporary issues.
- 6. Be familiar with the pollution, and industrial safety.
- 7. Recognize the analogy between health hazard and sustainability and the limit of health hazard...
- 8. Identify separations equipment of various types and their components.
- 9. Understand the mechanism of the separation by membrane processes and the properties of membrane units in Reverse osmosis.

- B. Subject-specific skills
  - B1. Use the techniques, skills, and modern engineering tools necessary for engineering practice in environmental pollution applications
  - B2. Communicate effectively.
- B3. Understand professional, social and ethical responsibilities.
- B4. Identify, formulate and solve environmental pollution problems
- B5. Work in groups and function on multi-disciplinary teams.
- B6. Be able to apply modern knowledge and to apply mathematics, science, engineering and technology to environmental pollution control problems and applications.
- B7. Evaluate competing environmental pollution technologies on factors such as simplicity, reliability, and cost.

## Teaching and Learning Methods

- 1. Lectures.
- 2. Homework and assignments.
- 3. Tests and Exams.
- 4. In-Class questions and discussions.
- 5. Connection between theory and application.
- 6. Seminars.
- 7. Reports, presentations, and posters.

#### Assessment methods

- 1. Examinations, Tests, and Quizzes.
- 2. Extracurricular activities and homework.
- 3. Student engagement during lectures.

#### C. Affective and value goals

- C1. Characterization, analyses and evaluate scientific and engineering information and identify knowledge gaps and opportunities to solve pollution and design control equipment
- C2. An ability to draw on your academic or subject knowledge to identify solutions of a practical or technical nature.
- C3. Identify knowledge gaps and opportunities to solve pollution and design control equipment

- D. General and rehabilitative transferred skills (other skills relevant to employ ability and personal development)
- D1. Working in a group or team to solve effectively the problems related to environmental pollution
  D2. Speed intuitive, predictability and evaluate information and ideas in the handling of pollution from petroleum and other industries

## 11.Infrastructure

1. Books Required reading:

- 1. Environmental Engineering by Joseph A. Salvato, P.E., Dee, Fifth Edition, 2003, John Wiley & Sons, Inc.
- 2. Industrial safety, Roland p. Blake, 1963 by prentice Hall, Inc.

| 2. Main references(sources)   | Library,<br>Websites  |
|---|---|
| A- Recommended books and references (scientific journals, reports). | <ol> <li>Environmental Engineering by Ruth E Weiner and Robin A. Matthews, Fourth Edition, 2003, Butterworth- Heineman press.</li> <li>Bharucha, E. 2003, Textbook for Environmental Studies, University Grants Commission, New Delhi and Bharati Vidyapeeth Institute of Environmental Education and Research.</li> <li>Fundamentals of Water Treatment Unit Processes by David Hendricks, 2011, CRC Press.</li> </ol> |
| B-Electronic references, Internet Sites                             | Websites  |

## 12. The development of the curriculum plan

- 1. Work to develop the curriculum by increasing the cognitive and scientific capacity through scientific publications and recent research of books, references and conferences.
  - 2. Adopting modern interactive teaching methods.
- 3. Activating the programs of twinning with international universities to view modern curricula and teaching methods and exchange experience.

#### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the programme specification.

| 1. Teaching Institution                              | University of Baghdad - College of Engineering           |
|--|--|
| 2. University Department/Centre                      | Chemical Engineering Department                          |
| 3. Course title/code                                 | Basic principles of chemical engineering 2 – Chem. E.244 |
| 4. Modes of Attendance offered                       | Yearly system with full study                            |
| 5. Semester/Year                                     | 1st & 2nd / Academic Year 2020 – 2021                    |
| 6. Number of hours tuition (total)                   | 120 hour / 4 hour per weak                               |
| 7. Date of production/revision of this specification | 6/2/2021   |

#### 8. Aims of the Course

- 1. Material balances with chemical reaction review
- 2. Study material balances with recycle, by pass and purge.
- 3. Study Real gas relationships and gas mixture
- 4. Study Forms of energy and Latent heat of vaporization
- 5. Knowing the First law of thermodynamic
- 6. Define Standard heat of reaction, Types of systems, Heat capacity
- 7. Energy balance without and with chemical reaction
- 8. Humidity charts and their uses
- 9. Heat of solution, Enthalpy-concentration charts and their uses.
- 10. Material and energy balance for complete projects.
- 11. Unsteady state material balance,
- 12. Unsteady State energy balance.

9. Learning Outcomes, Teaching ,Learning and Assessment Methods

- A- Knowledge and Understanding
- A1. Calculation Real gas relationships and gas mixture.
- A2. Define Forms of energy and the First law of thermodynamic
- A3. Using Energy balance without and with chemical reaction
- A4. Enthalpy-concentration charts and their uses
- A5. Using Humidity charts
- A6. Knowing how to balance unsteady material and energy systems
- B. Subject-specific skills
- B1. Solving problems for real gas and their mixture
- B2. Solving problems for energy balance with and without chemical reactions
- B3. Using diagrams and chart for calculation Humidity and heat of solution
- B4. Using unsteady state balances for solving systems
- C. Thinking Skills
- C1. Learning the basic calculation and principles in chemical engineering
- C2. Using mathematical methods for solving material and energy balances
- C3. Solving unsteady state models
- D. General and Transferable Skills (other skills relevant to employability and personal development)
  - D1. Activity with society D2. The work with a team

  - D3. How engineering is benefitial for society and environment
  - 10 Teaching and Learning Methods
    - 1. Lectures
    - 2. Class work
    - 3. Home work
    - 4. Daily and monthly exams
    - 5. Problem answers
    - 6. Meeting
  - 11 Assessment methods
  - 1. Daily and monthly exams
  - 2. Outside lecture teaching
  - 3. Students problem answers
  - 4. Students notes

## 13. The development of the curriculum plan

- 1. Organize seminars for students to discuss and solve problems for complete systems.
- 2. Organize field visits to the factories and refinery units to learn more about the construction and the operation of operational units.

#### REACTOR DESIGN COURSE SPECIFICATION

#### HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

#### **COURSE SPECIFICATION**

This document provides the academic description of the Reactor Design course, which includes introducing the skills of the third stage students in the Department of Chemical Engineering to understand what chemical reactions are from an engineering point of view.

This course will provide students with sufficient understanding to convert the information obtained by laboratory into information useful in designing chemical reactors, which will make the most of them in the next phase of designing the reactors for the engineering project and thus provide a graduate who is able to design reactors.

| 1.Teaching Institution                              | University of Baghdad - College of Engineering |
|---|--|
| 2.UniversityDepartment/Centre                       | Chemical Engineering Department                |
| 3.Course title/code                                 | Reactor Design                                 |
| 4.Modes of Attendance offered                       | Class / online class                           |
| 5.Semester/Year                                     | Annually (2 semesters)                         |
| 6.Number of hours tuition(total)                    | 64 hours                                       |
| 7.Date of production/revision of this specification | 2020-2021                                      |
| 8.Aims of the Course                                |  |

The goals of studying this subject are the successful design and operation of chemical reactors and design multiple reactors system.

9. Learning Outcomes, Teaching, Learning and Assessment Methods The course including 64 total teaching hours (32 of them are tutorials). Also, the course containing 4 examinations and 2 quizzes with overall grade of 30 % (15% per each semester), and the final examination of 70% of the total grade.

- A-Cognitive goals. A1. Overview of Chemical Reaction Engineering
  - A1. Kinetics of Homogeneous Reactions
- A2. Interpretation of Batch Reactor Data
- A3. Introduction to Reactor Design
- A4. Ideal Batch Reactors
- A5. Design for Single Reactions
- B. The skills goals special to the course.

This course will provide students with sufficient understanding to convert the information obtained by laboratory into information useful in designing chemical reactors, which will make the most of them in the next phase of designing the reactors for the engineering project and thus provide a graduate who is able to design reactors.

Teaching and Learning Methods

The course including 64 total teaching hours (32 of them are tutorials).

#### Assessment methods

The course containing 4 examinations and 2 quizzes with overall grade of 30 % (15% per each semester), and the final examination of 70% of the total grade.

C. Affective and value goals

At the end of the course presented, the student will possess all the necessary skills to deal with problems in designing or operating reactors.

D. General and rehabilitative transferred skills (other skills relevant to employability and personal development)

With the Reactor Design Course, the graduate will have sufficient skill and knowledge in designing and operating reactors in various state departments and their laboratories or laboratories of large companies and small enterprises of the private sector.

### **COURSE SPECIFICATION**

This Course Specification provides a concise summary of the main features of the course and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It should be cross-referenced with the program specification.

| 1. Teaching Institution                              | College of Engineering/ University of Baghdad  |

#### 9. Aims of the Course

- 1- Review of the laws of thermodynamics and driving a network of applicable equations in all branches of chemical engineering.
- 2- Review of the methods for the calculation of heat and work requirements in physical and chemical processes.
- 3- Review of the methods for the determination of equilibrium conditions for transfer of chemical species between phases.

| Required reading:  · CORE TEXTS  · COURSE MATERIALS  · OTHER                              | Textbook  J. M. Smith & H. C. Van Ness "INTRODUCTION TO CHEMICAL ENGINEERING THERMODYNAMICS" 8 <sup>th</sup> edition. McGraw-Hill 2018  References  1- Michael J. Moran, Howard N. Shapiro, Daisie D. Boettner, Margaret B. Bailey "Fundamentals of Engineering Thermodynamics" 9th Edition, 2018.  2- Robert H. Perry, Don Green "Perry's Chemical Engineering Handbook "9 <sup>th</sup> edition McGraw-Hill 2019.  3- Yunus A. Cengel, and Michael A. Boles," Thermodynamics: An Engineering Approach "7 <sup>th</sup> edition, 2012. |  |  |
| Special requirements (including example workshops, periodicals, IT software, websites)    | Available websites related to the subject   |  |  |
| Community-based facilities (including example, guest lectures, internship, field studies) | Field and scientific visits   |  |  |

| 13. Admissions             |    |
|----------------------------|----|
| Pre-requisites             |    |
| Minimum number of students | 30 |
| Maximum number of students | 80 |

Instructor: Prof.Dr.Ahmed Faiq Al-Alawy

Chem. Engr. Dept. College of Engineering University of Baghdad Tel: +964-7901205905
