## **ABSTRACT**

The Housing Environment consist from many different building types, and it continent in side it many different educational, background and behaviors according to the families that are living on it, And the types of the residential buildings informed anew advanced building style specialized from the traditional housing environment ,in planning ,designing ,and constriction buildings. So this Type indicated different solution and it should be updating to the families' culture and their environmental, psychosocial needs with mention that it should keep their specialization in the hall environment housing. But in this type of housing we have many psychosocial effects which may be effect badly; these effects comes from deficiency and in complete understanding for the people needs and their characterize, From All that The research find that it is very important to identify the characteristics of the building housing types and its effectiveness on the social status complementing and social relationships a result of man behavior towards the housing environment.

**The problem of the research had been determined by** the lack of knowledge framework coverage on the extent of integration between housing types and social reflects which include social interaction, communications in the residential complex buildings, and its effectiveness on social activates on its different sides, and if it found it will be common and not specific for special environment culture.

**The main objective of this research** is that the housing is considered as central place effect on important for humanities and the housing environment consider as one of the most environment related to the human beings as well as our caring to this environment and its specialties and cultural for us the successful social interaction.

From above, the research has focused on finding clearness approach and analytical for the housing building types and identify the effectiveness and its relationship between types on the social life status.

**The main hypothesis of this research** is that the research expected that there is a relation between the housing types and social reflect activities.

The detailed hypothesis of the research included three hypotheses which are:

The First one was "The urban housing planning have a positive effect on the social interaction communication". The Second one was "The social interaction communication have a positive effect on felling belong to the housing built environment.

The Third "There is a relation between the housing type and demographical characteristic for the living people.

**To improve the research hypothesis** it was divided in to three chapters which include the theoretical approach of the research, and the final chapter includes the practical analytical research approach. The first covered the theoretical framework related the social science and its reflexes on city wide social affairs, The second chapters covers same aspects of housing environment and unveil same of theoretical studies related to it ,While the third chapters focuses on different types of housing environment and description of the relation between its physical components. Then the fourth chapters contain items related to survey methodology and data processing and findings, and from The analysis of residential complex housing that are choosing to by studied ,the sample contain 60 person how use to live equally in three complex housing And then the research finally comes up with leading to general conclusions and recommendations related to the content of the research that we couldn't separate the housing building types and and its relationship between types on the social life status.
